DETAILED ACTION

1. Claims 1-12 have been examined.

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 3. Claim 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 4. The claims are generally narrative and indefinite, failing to conform with current U.S. practice. The limitation "determining whether key update assignment that transmits these node keys in different mode according to the change of a UE" in lines 14-15 of claim 1 does not precisely state what is to be determined and the correlation between update assignment and the keys in different mode. Therefore, the examiner has interpreted the sentence in a broadest sense and the applicant is required to address the deficiency mentioned above.
- 5. Claims 1 recites the limitation "the change of a UE" in 15. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

10/529,411 Art Unit: 2131

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 7. Claims 1-9, 11 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Dinsmore et al. U.S. Pat. No. 7043024 (hereinafter Dinsmore).
- 8. As per claim 1, Dinsmore discloses a method for key management and assignment for information encryption in a radio network system which include a root node, plurality of intermediate nodes in the root node and plurality of leaf nodes in each intermediate nodes of the radio network system providing Multimedia Broadcast or Multicast service, comprising the steps of: generating a group key for the root node which has plurality of intermediate nodes as child nodes (Dinsmore: column 1 lines 51-67); generating an intermediate key using the group key for each of the intermediate nodes that have its own one parent node and one or more child nodes and have its own intermediate key (Dinsmore: column 1 line 60 – column 2 line 7: hierarchy of keys and each intermediate node/interior node has its own key); requesting a leaf node key in a user equipment (UE) for the service; generating the leaf node key using the intermediate key (Dinsmore: figure 1: key of each node descends from a parent node key); delivering the leaf node key as a private key to the UE on a dedicated channel (Dinsmore: column 1 lines 15-23: secure unicast within multicast system); and determining whether key update assignment that transmits these node key in different modes according to the change of UE (Dinsmore: column 2 lines 19-31: if one user is evicted, new keys should be distributed for the system to operate is a different mode).

Application/Control Number:

10/529,411

Art Unit: 2131

9. As per claim 2, Dinsmore discloses the method of claim 1. Dinsmore further discloses

wherein each user keeps node key information on all nodes that the node chain where he/she

locates to the root node of the tree, including leaf node, intermediate nodes of respective layers

and the root node (Dinsmore: column 2 lines 1-7).

10. As per claim 3, Dinsmore discloses the method of claim 1. Dinsmore further discloses

wherein when a new user joins in the service, this user is connected to a node via its access

parent node as a new leaf node and this user needs to obtain keys of all nodes including

intermediate nodes and root nodes that are passed by the node chain from the access parent node

to the root node; these node keys won't be updated due to the joining of the user; the

transmissions of these node key are sent to the user sequentially in point-to-point mode and are

encrypted by using the key of the new leaf node (Dinsmore: column 2 lines 1-19: prior to

eviction).

11. As per claim 4, Dinsmore discloses the method of claim 1. Dinsmore further discloses

wherein when a new user joins in the service, this user is connected to a node as a new leaf node

via its access parent node and this user needs to obtain keys of all nodes including intermediate

nodes and root nodes that are passed by the node chain from the access parent node to the root

node; these node keys will be updated due to the joining of the user; for the newly-joined user,

the transmissions of these new nodes keys are sent to the user sequentially in point-to-point

Page 4

10/529,411

Art Unit: 2131

mode and are encrypted by using the key of the new leaf node (Dinsmore: column 2 line 54 – column 3 line 6).

- 12. As per claim 5, Dinsmore discloses the method of claim 4. Dinsmore further discloses wherein for each node that needs key update, new keys will be encrypted with old keys and will be delivered to the final leaf node's users that they belong to in point-to-multipoint broadcast mode (Dinsmore: column 2 lines 54-67).
- 13. As per claim 6, Dinsmore discloses the method of claim 1. Dinsmore further discloses wherein when a user leaves the service, a leaf node is disconnected from its parent node and the keys of all nodes that the node chain passes by from the disconnected node to the root node of the tree are sequentially updated (Dinsmore: figure 2: the node keys are updated).
- 14. As per claim 7, Dinsmore discloses the method of claim 6. Dinsmore further discloses wherein for each node that needs key update, the key update of node is performed only after key updates of all its child nodes finish (Dinsmore: column 2 lines 54-57: the update is performed from bottom towards up).
- 15. As per claim 8, Dinsmore discloses the method of claim 6. Dinsmore further discloses wherein for each node that needs key update, the new node keys are delivered to all child nodes of it one by one in point-to-point mode and are encrypted with key of each child node (Dinsmore: column 2 line 54- column 3 line 16 and figure 2).

Application/Control Number:

10/529,411

Art Unit: 2131

.

Page 6

16. As per claim 9, Dinsmore discloses the method of claim 8. Dinsmore further discloses

wherein each child node still uses the corresponding node key to encrypt the new node key, and

delivers the new node key to the final leaf node's users that they belong to in'point-to-multipoint

mode (Dinsmore: column 2 lines 54-62).

17. As per claim 11, Dinsmore discloses the method of claim 1. Dinsmore further discloses

wherein the root node locates in the same logical network device as that intermediate node does

(Dinsmore: column 1 line 15-31 and figure 2).

18. As per claim 12, Dinsmore discloses the method of claim 1. Dinsmore further discloses

wherein said root node locates in the different logical network device from that intermediate

node does (Dinsmore: column 1 line 15-31 and figure 2).

Claim Rejections - 35 USC § 103

19. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

20. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dinsmore.

Art Unit: 2131

As per claim 10, Dinsmore discloses the method of claim 1. Dinsmore discloses the multicast channel can be embodied in various forms such as wireless network, the public internet, a cable network, or a like (Dinsmore: column 1 lines 28-31). Dinsmore does not explicitly disclose the encryption process is accomplished by RNC. However, one with ordinary skill in the art understands that the wireless network includes radio network and radio network controller is essential for controlling communication flow in a radio network. Therefore, it would have been obvious to one having ordinary skill in the art to utilize RNC for secure communication within network.

Response to Arguments

22. Applicant's arguments filed 11/19/07 have been fully considered but they are not persuasive.

Regarding applicant's remarks, the prior art of record does not disclose the limitation "determining whether key update assignment that transmits these node keys in different modes according to the change of a UE". However, since the assignment of node keys and the modes of node keys are not clearly presented in the claim, the examiner has interpreted the limitation in the broadest sense as described above.

Regarding claim 7, applicant argues that the prior art does no disclose that the key update is performed only after the key updates of all its child node. However, Dinsmore discloses that the key update is performed from the bottom towards up, meaning that the child nodes are always updated first (Dinsmore: column 2 lines 54-57). Therefore, applicant's argument are traversed.

Conclusion -

23. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR ·1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shin-Hon Chen whose telephone number is (571) 272-3789. The examiner can normally be reached on Monday through Friday 8:30am to 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
